

Panels are easily handled and are clearly identified for assembly, with pre punched electrical and plumbing service holes. Continual product and market development means that demand for steel framed homes will keep increasing. A steel framed house is a quality product that delivers to the home-owner long-term peace of mind and cost savings.

Steel frames require different techniques but are quick and easy to erect. Because steel as a material has consistent strength and complies with strict standards and tight tolerances, every stud is a good stud. It is lightweight and easy to handle, there is no time lost sorting to select suitable pieces, no need to tighten framework on site, and wastage of material is reduced.
